STAINING SYSTEMS
Cromatec I / II

FLEXIBLE STAINING SYSTEMS
WITH HIGHEST THROUGHPUT

DESIGN &
MANUFACTURING
MADE IN GERMANY

Dear Customer,

thank you very much for your confidence in Slee products!

Before you start operating the device, please read the operating instructions carefully to familiarize yourself with the proper operation and functions. The device should only be operated by specially trained and instructed staff. The specified safety measures as well as the regulations and hygiene standards of the respective laboratories must be respected.

Enjoy working with your new device!

Your team from SLEE medical GmbH

Please note:

Some of the images in this manual may show special equipment and / or accessories that are subject to a charge. The image may differ slightly from the product. Errors excepted.

We always try to keep our documents up-to-date and free of errors. However, should you notice any mistakes, we would be grateful if you could provide us with feedback. Comments on the actual content are also welcome at any time. Simply e-mail us at marketing@slee.de.

The information, numerical data and notes contained in this document represent the current state of scientific knowledge and state-of-the-art technology as we understand it following thorough investigation in this field. SLEE medical GmbH is under no obligation to update the present manual periodically and on an ongoing basis according to the latest technical developments, nor to provide our customers with additional copies, updates etc. of this document. To the extent permitted in accordance with the national legal system as applicable in each individual case, we shall not be held liable for erroneous statements, drawings, technical illustrations etc. contained in this document. In particular, no liability whatsoever is accepted for any financial loss or consequential damage caused by or related to compliance with statements or other information in this document. Statements, drawings, illustrations and other information regarding the contents or technical details are not to be considered warranted characteristics of our products. These are determined only by the contract provisions agreed between ourselves and our customers. SLEE medical GmbH reserves the right to change technical specifications as well as manufacturing processes without prior notice.

CONTENTS

1 INTRODUCTION

This manual shall help you handling the device. Please read the manual completely and follow the advice. Acquaint yourself to the control elements and their functionality by studying the figures. This way, an adequate use of the device is ensured.

1.1 Used symbols and their meanings

⚠️	Danger warnings are marked by a red framed triangle.
⚠️	Dangers, warnings and cautions are marked by this symbol.
⚠️	Warnings regarding flammability are marked with a yellow triangle, showing a flame.
⚠️	Hot surfaces are marked by this symbol. Avoid direct contact to prevent risk of burning.
ℹ️	Special instructions regarding the operation of the device are marked by this symbol.

1.2 Intended use

The Cromatec I / II is an automated stainer and is made for the purpose of staining tissue specimens in histology and pathology laboratories only. The device may be operated only according to the instructions contained in this manual. Any other use of the Cromatec I / II is considered improper.

The conditions for operation, maintenance and service mentioned in this instruction manual must be strictly observed.

i	To prevent damages to the device and specimens, only use accessories and spare parts which have been approved by SLEE medical GmbH.

1.3 Authorized operators

The Cromatec must be used only by those persons who have been authorized by the owner. In his working area, the operator is responsible with regard to third persons. The owner must give the operator access to this instruction manual and make sure that the operator has read and understood its contents.

1.4 Device type

All information provided in this manual applies only to the device type indicated on the title page. A name plate indicating the device serial number is attached to the rear panel of the device.

1.5 Safety Instructions for working with the Cromatec I / II and reagents

When working with the Cromatec I / II, please pay particular attention to the used reagent's characteristics regarding flammability and further hazards. Read the manual carefully before working with the Cromatec I / II and reagents for the first time. Keep the manual near and easily accessible to the device. Consult the manual in case of obscurities.

⚠️🔥	Many reagents' fluids and vapours are flammable. If you are not sure about using a reagent, please contact the manufacturer.
⚠️	Always wear protective clothes (e.g. laboratory coat, gloves, safety glasses) to prevent accidental contact with reagents! Do not eat, drink or otherwise consume reagents and/or reagent vapours! Do not eat, drink, smoke within the surrounding area of the device! In case of accidental eating or drinking of, or skin contact with a reagent or its vapours, immediately consult the correspondent safety data sheet and follow the instructions stated in the corresponding sections! Make sure the exhaust air decontamination system is working before starting to work with the Cromatec and reagents! Ensure that the device is cleaned and maintained according to the schedule and advice given in the respective chapter! If the Cromatec II is not in use, the water supply must be switched off at the tap independently. In case the device becomes a defect, the warranty expires.
ℹ️	If you have trouble understanding instruction, questions, or are not sure about the safety, please consult your sales representative first!

An incorrect operation may stop or interrupt tissue processing. Make sure that the device is not interfered with or changed by unauthorized personnel during operation.

An incorrect operation may stop or interrupt tissue processing. (If power is turned off by unauthorized personnel, the dying process may be interrupted, and dyeing problems may occur.) Design the work environment so that only operators with expertise can use the machine. (As a precaution, also consider the use of external alarms, etc.)

Do not bring open flames near the device.

The device uses organic solvents that can ignite when exposed to fire.

Never allow foreign objects to enter the device.

The ingress of water, metal, paper or other foreign objects into the air inlets (to the fan, etc.) may result in fire, electric shock, operator injury, equipment failure, etc. If foreign objects have entered the device, switch off the device immediately and contact the technical service department or a local representative of SLEE medical GmbH.

Do not operate the device while wearing metal objects on the body.

Body-worn wires (pins, jewellery, clothing, etc. made of metal) may come into contact with the device and cause an electric shock.

Never block the ventilation openings or air inlets on the device.

Never block the ventilation openings (air inlets) by setting them up against a wall or objects, and do not use the unit in a poorly ventilated place or with the dust cover still attached. This can lead to heat build-up in the device and a drop in its performance and also cause fires, accidents, failures, etc. due to abnormal overheating.

Check the power cord, other cables and the power outlet regularly for damage and dust accumulation.

Foreign objects and dust accumulation on the wall outlet can cause fires. Clean the mains socket at regular intervals.

Make sure that no tissue gets into the drying station and still sticks with flammable solvent.

If stored flammable solvents are heated in the drying station and evaporate, this can cause fires or explosions.
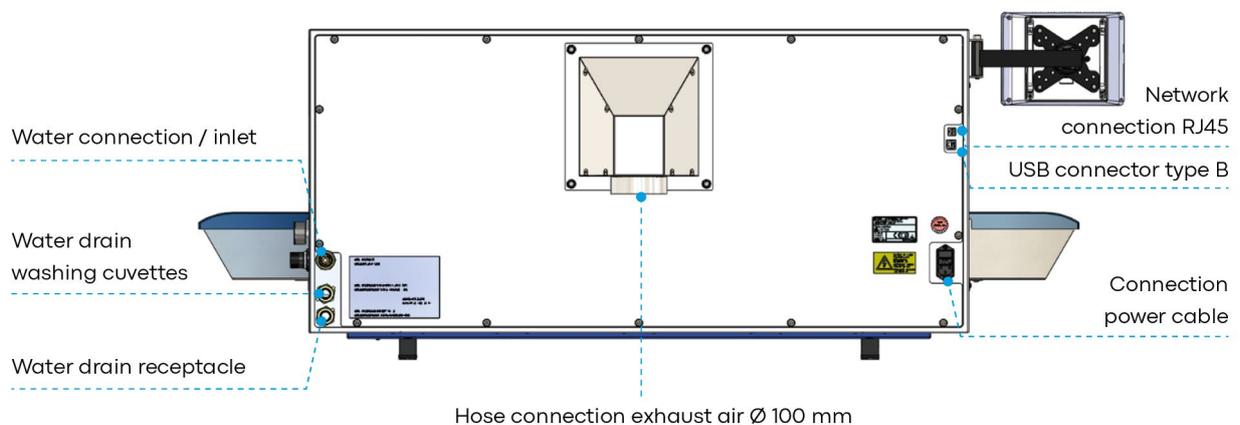

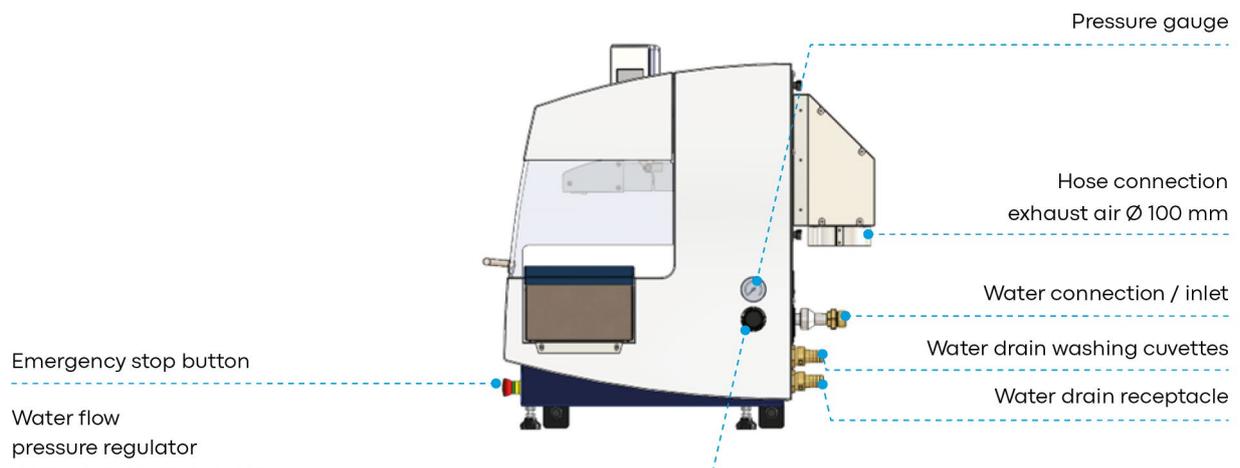

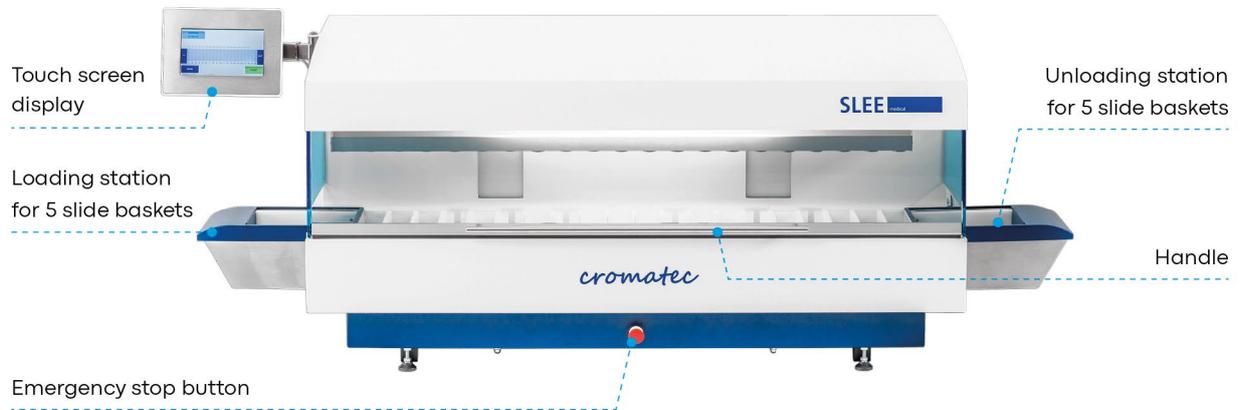

Do not place the device in a place that is used as a living area.

If a common room is used, an exhaust system is required. Provide protection against electrostatic discharge at the installation site.

Install the device indoors. Do not place the unit in a location exposed to direct sunlight, snow or rain.

This product is designed for indoor use; do not use it outdoors. UV radiation and high temperatures can cause damage to the device. Never use the device when it is exposed to snow or rain, as this could result in electric shock or short circuit.

2 OVERVIEW DEVICE

3   COMPONENTS

The Slee staining system Cromatec I / II is provided with the following standard components:

Cromatec I

Item-No.:	Description	Quantity
41000566	Cover plate	2 pcs.
41000017	Plastic cuvettes normal	20 pcs.
41000410	Plastic washing cuvettes complete	6 pcs.
41000584	Insert tub assembled	1 pcs.
41000580	Drip tray with lifting plate	1 pcs.
41000270	Receiving bracket	6 pcs.
38500051	Slides	6 pcs.
41000655	Inlet hose	1 pcs.
41000657	Drain hose à 2 m	2 pcs.
33010428	Hose clamp (mounted)	2 pcs.
41000654	Reducer ¾ x ½ inch	1 pcs.
-	Mains cable	1 pcs.
-	Instruction manual	1 pcs.
41000558	Transport handles	4 pcs.

Cromatec II

Item-No.:	Description	Quantity
41000750	Heating cuvette / drying station, adjustable from 30 °C to 70 °C	1 pcs
41000767	Filter pad for heating cuvette, for collecting dripping wax	1 pcs
41000566	Cover plate	2 pcs
41000017	Plastic cuvettes normal	20 pcs
41000410	Plastic washing cuvettes complete	6 pcs
41000584	Insert tub assembled	1 pcs
41000580	Drip tray with lifting plate	1 pcs
41000270	Receiving bracket	6 pcs
38500051	Slides	6 pcs
41000655	Inlet hose	1 pcs
41000657	Drain hose à 2 m	2 pcs
33010428	Hose clamp (mounted)	2 pcs
41000654	Reducer ¾ x ½ inch	1 pcs
-	Mains cable	1 pcs
-	Instruction manual	1 pcs

41000558	Transport handles	4 pcs
41000782	Extension cable for drying station	1 pcs

4   SPECIFICATIONS

General

Nominal Voltage	100 – 240 V AC +/- 10 %
Nominal frequency	50 / 60 Hz
Max. power consumption	350 VA
Max. heat emission	350 J/s
IEC 1010 classification	Protective class 1; Pollution degree 2; Overvoltage installation category II
Fuses	2 x T 3,15 A
Interfaces	USB, RJ 45
Operating temperature range	+10 to +35 °C
Operating humidity	max. rel. 80 % non-condensing
Storage temperature range	+5 to +55 °C
Storage humidity	max. rel. 80 % non-condensing
Battery running time	4 h (the heating station is switched off in battery mode)
Exhaust air volume	Minimum air volume approx. 200 m³/h, required pressure difference of approx. 100 Pascal (Pa), nominal diameter for hose connection on the back is 100 mm

Dimensions and weight

Dimensions (W x D X H)	1.560 mm x 640 mm x 620 mm
Weight unpacked (without accessories)	120 kg

Capacity

Specimen slide throughput	Up to 1.800 slides/h*
Loading capacity	Up to 20 slide baskets simultaneously
Slide basket capacity	30 slides
Total number of stations	19 + 1 heating / drying station
Number of heating / drying stations	1
Temperature heating stations	30 – 70 °C
Number of washing stations	Max. 6
Reagent / Washing cuvettes volume	400 ml
Water flow regulation for washing stations	0,5 to 2,0 l/min
Load / Unload stations	5 each
Programs	20 programs, up to 20 steps each
Incubation time setting	5 sec. up to 59 min, 59 sec.

*depending on staining protocol
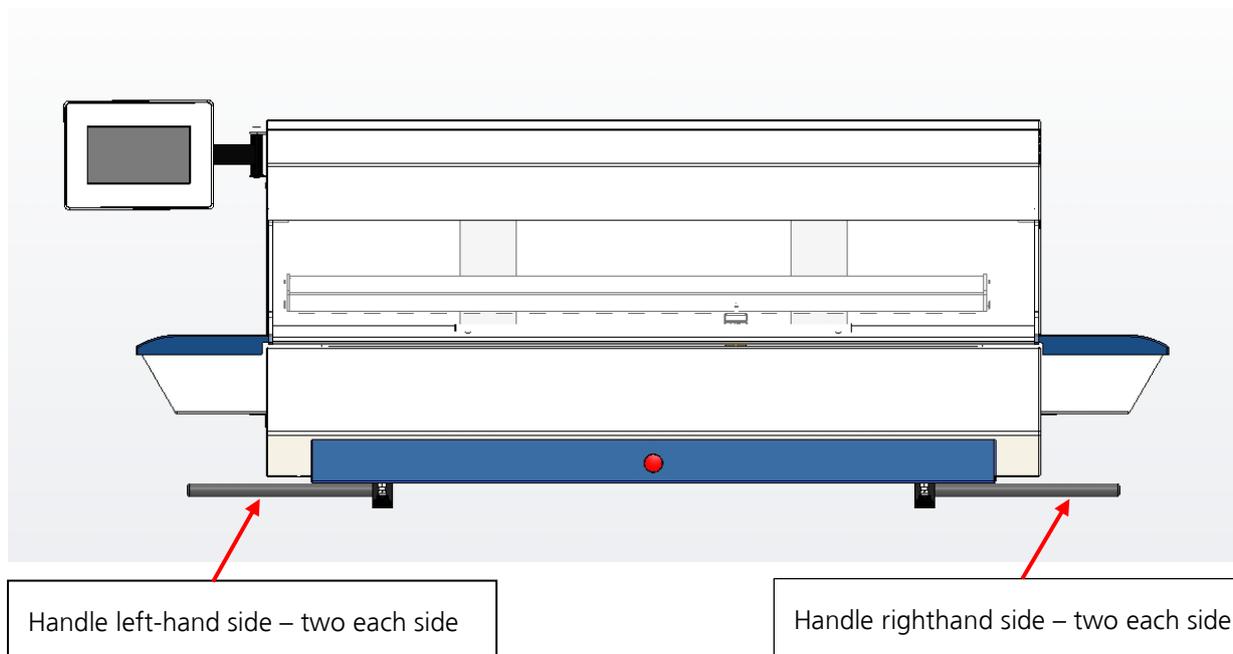

5   SETTING UP THE DEVICE

5.1   Installation site requirements – first time

Requirements for the installation site:

- The device may only be used indoors.

- Stable, precisely horizontal laboratory table with a uniform surface of 1.80 m and a depth of 0.80 m, which can hold a weight of 120 kg!

- The minimum distance between the device and the wall or other devices should be at least 10 cm to ensure adequate ventilation. Also make sure that there are no flammable objects in the area heated by the unit.

- Tap water connection of maximum 2.50 m and wastewater pipe of 2.00 m from the corresponding input / output on the rear wall of the device.

- If the device is to be operated with an exhaust air hose, a fume cupboard with a maximum distance of 3.50 m from the device is required. Alternative: Operation with activated carbon filter.

- Sufficient space of min. 0.90 m above the bench to easily open / close the device cover.

- Stable ambient temperature between + 10 ° C and + 35 ° C

- Relative humidity of maximum 80%, non-condensing.

- Do not place any equipment nearby that could cause vibration.

- The device must not be exposed to direct sunlight.

Lift the device by carrying the handles (see picture below). Four people are needed to lift and / or carry the device as the device weighs approximately 120 kg in total.

Handle left-hand side – two each side

Handle righthand side – two each side

5.2 Tap water supply connection

Unpack the water inlet hose (including safety-aqua stop).

Connect the hose to the inlet connection.
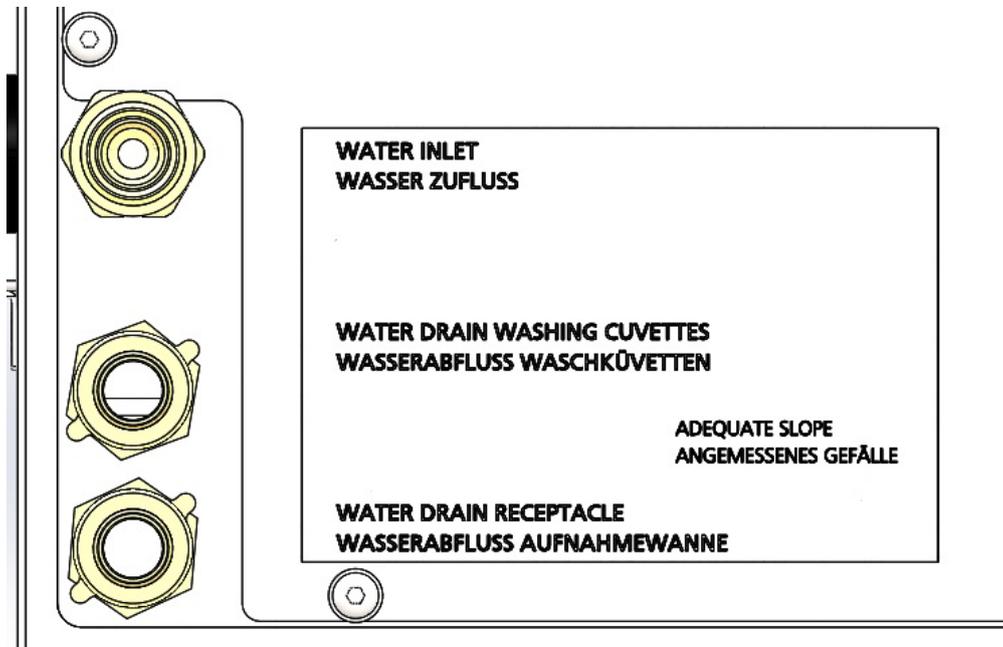

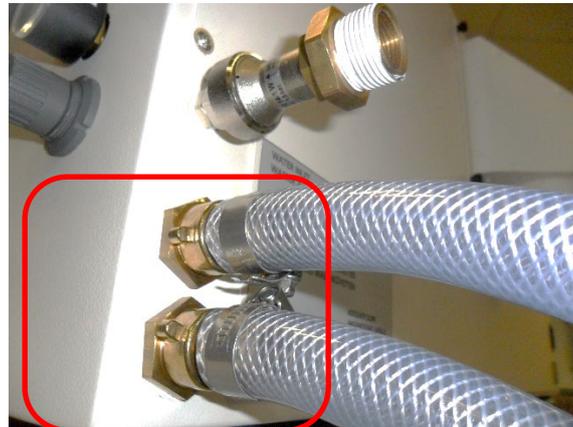

i	Always connect the water inlet hose!

5.3 Waste water hose connection

Connect the waste hose to the wastewater connection. Please note that water can escape in the upper drain hose, but in the lower only in an exceptional case.

	Please do not bend the hoses and ensure an adequate slope.
i	The two drains on the rear of the unit must never be brought together.
	The lower drain is to be used only for cleaning purposes to rinse and clean the cuvette trough. Connect as required and provide sufficient slope.
	The upper drain is only for the maximum of 6 water baths and must be connected constantly with sufficient slope.

5.4   Electrical connection

The electronical connection is located at the rear of the unit.

Connect the mains cable to the mains power supply socket.

⚠️	The device must be connected to a grounded mains power outlet socket. Make sure to use the appropriate mains cable for the local voltage supply.

5.5   Connection of air evacuation (optional)

For the connection to an external air evacuation please contact the local Slee service.

5.6   Inserting / Changing the activated carbon filter

i	The Cromatec will be delivered with the filter already installed.

1. For changing the filter, unscrew the 4 screws at the rear of the device panel.

2. Take out the filter and replace with a new one.

3. Connect the filter housing to the rear panel again.

4. Set filter change in the menu.

5.7 Leveling the device

- Once all accessories are installed move the device to its final position.

- The easiest way to find the right level is using a spirit level.

- The right level will be achieved by adjusting the device feet.

5.8   Inserting the cuvettes

There are three different cuvette types:

- Reagent cuvettes
- Running water cuvettes
- Heating cuvette / drying station (only Cromatec II)

Reagent cuvette	The reagent cuvette can simply be placed at the any station.
Washing cuvette	The washing cuvette can simply be clicked into the water tube at the button of the station. The position can be freely selected.

5.9 Inserting the heating cuvette / drying station - only Cromatec II

Heating cuvette / drying station

Connection of heating cuvette / drying station

The heating cuvette is only available once in the device, as a heating cuvette / drying station in station 1, or as a heating cuvette / drying station in station 20. Only the plastic cuvette in station 1 or 20 is replaced by the heating cuvette or drying station. The heating station in station 1 the power supply and air supply are connected directly at the bottom left of the tub. For dry station in station 20, the power supply and the air supply are connected each with an extension in the bottom left of the tub. When placing the power supply and the air supply, it is important to ensure proper installation. For power connection, the white mark on the plug must face up.

This following step is very important to obey:

In station 1 as hot air station, the figure 1 on the housing facing to the user. In station 20 as drying station, the figure 20 must face to the user, so the hot air station has to be turned 180 degrees.

⚠	Please do not use chloroform, acetone and toluene (Methylbenzene).

5.10 Inserting the slide baskets

The slide basket carrier system consists of two parts:

- The slide basket for 30 slides

- The basket carrier to connect to the magnet system

|	
slide basket	basket carrier
To make sure the slide basket is not falling out of the transport system, you can hold it with your finger as shown in the picture.	

i	The transport system has to be clean at all time to make sure the magnets are taking the full slide baskets. Please do not use the device with just the transport system but always with a basket inserted.
⚠	Please pay attention to an even load.

5.11 Setting the water pressure for running water station

The red marking indicates the maximum flow pressure during operation.

5.12 Store samples in xylene at the end of the process

For this purpose, an insert tray with bow handle and lid was specially developed so that the samples can be stored in xylene at the end of the process. The bow handle may only be used to remove the tray from the spout pan; otherwise, the lid collapses so that the xylene does not evaporate (over night or when not in use for a long time), it must not remain in the device during the process.

6   OPERATION

6.1   Switching on the device

Switch on the device at the main switch at the rear panel of the device.	

6.2   Main menu – home srceen

After switching on the device for the first time, the system starts booting and the following display is shown:	

6.3 Programs

Please press "Menu" on the home screen to enter the main menu.	**MAIN MENU** Programs Reagents Users Settings ←

From this status all functions are started.

Programs	The "Programs" button is for selection and changing of programs.
Users	The "Users" button is to set and change user data
Reagents	The "Reagents" button is for managing the reagents.
Settings	The "Settings" button is for general settings.

6.3.1 Edit a new or existing program

Please follow the below instructions to save a new program or to edit an existing program.

Please press "Programs" to find the list of programs or to select a new one.	**MAIN MENU** **Programs** **Reagents** **Users** **Settings** ←
	PROGRAM SELECTION | Shortname	Name	Duration	RMS	RQ	Show
---	---	---	---	---	---
HE1	HE1	0h:15min	OFF		🔍	 ↑ ↓ ← **New**

🔍	With the magnifier you can edit an existing program.
New	With the button "new" you can program a new program.

After pressing "New" in the "program selection" menu you see the following:	PROGRAM DETAILS
	Shortname HE1 — Change
	Name HE1 — Change
	Dripoff time 5 — Change
	Total duration 0:15:00 — Steps
	RMS OFF
	Abort — Clear — Save as new — Save
While pressing "Change" behind "Shortname" you can insert the requested details ("Shortname" is the name of the program to be seen in the overview): Please confirm every step with the "OK" button and to return to the menu "Program details".	**Enter Shortname:** q w e r t y u i o p — 7 8 9 a s d f g h j k l % — 4 5 6 z x c v b n m , . - — 1 2 3 ^ — 0 ( ) HE — <- Abort — OK

While pressing "Change" behind "Name" you can insert the requested details ("Name" is the long version of the name of the program to be seen in the overview):	**PROGRAM DETAILS** Shortname HE1 Change Name HE1 Change Dripoff time 5 Change Total duration 0:15:00 Steps RMS OFF Abort Clear Save as new Save
Please confirm every step with the "OK" button and to return to the menu "program details".	Enter Name: q w e r t y u i o p 7 8 9 a s d f g h j k l % 4 5 6 z x c v b n m , . - 1 2 3 ^ 0 ( ) | <- Abort OK

While pressing "Change" behind "Dripoff time" you can select the time the basket may take out of the last cuvette for dripping of the reagent.	
You can select from 0 – 250. Please confirm every step with the "OK" button and to return to the menu "program details".	

While pressing "Steps" behind "Total duration" you can select the step time and reagent.	**PROGRAM DETAILS** Shortname HE1 **Change** Name HE1 **Change** Dripoff time 5 **Change** Total duration 0:15:00 **Steps** RMS OFF **Abort** **Clear** **Save as new** **Save**

i	Please note that the option "Hot air station" is preinstalled (if option has been chosen) and no changes can be done in the reagent details.
	"Drying station" can only be selected as station 1 or 20. The agitation is then switched off.

6.6 Settings

6.6.1 Settings of the Cromatec

Please follow the instructions below to edit and save settings.

If you want to change the settings of the Cromatec please press "Settings" in main menu.	**MAIN MENU** — Programs, Reagents, Users, **Settings**

6.6.2 Agitation / Fan

To change the settings for agitation and fan please select "Agitation / Fan" in the "Settings" menu.

If you want to change the settings of the Cromatec please press "Settings" in main menu.	**SETTINGS** — Agitation / Fan, Language, Filter, Clock, Options, Display, Service
The agitation and fan speed can be changed in the menu. You can select between slow, normal and fast. Please confirm your settings by pushing "Set".	**AGITATION / FAN** — Agitation: slow / normal / fast; Fan speed; Abort, Set

	The melting of the paraffin on the samples is dependent on the temperature, number of glass slides in the slide baskets, and sample thickness. In addition, the heating cuvette needs a certain amount of time to warm up, which is automatically controlled by a small waiting time via the software. When using the heating cuvette, the program does not start until the set temperature has been reached.

The Bluetooth function can also be switched on and off here. Here you also can set the Bluetooth connection from ON to OFF.	**OPTIONS** Bluetooth OFF Hot-Air station 30 C Abort V1.02 - 20190807 OK AM133170201521 - 1

6.7.4 Symbols during program

In mains operation, the battery is showed in grey until it is fully charged. Then the icon disappears.

	In mains operation, the battery is showed in grey until it is fully charged. Then the icon disappears.
	In floating operation, the battery icon shows the level, dark blue with sufficient residual charge and red below 25%.
	When switching off (in the buffer mode) a signal tone sounds.
	No new samples are recorded in floating operation.
	After end of program (or crash) in floating operation, the signal tone sounds also, then then the unit switches itself off.
	Monitoring filter runtime, change display. End of term with icon on the main screen display PopUp with change notice, both at program startup.
	Water pressure low.

6.7.5 End of program

After the program is finished, slide baskets are placed in the unload station (capacity 5 slide baskets) and the device indicates by a ton signal.	
In case the unload station is full, the device gives the following warning message:	

6.7.6 Stop a running program

If you want to stop a running program, press the "Stop" button.:	
The following message will appear. Press "OK" and the program will stop. You have to take out the slide baskets manually.	

6.7.7 Emergency stop

In case of an emergency, the operation function of the Cromatec can be switched off by pressing the emergency stop located at the lower front of the device.	
To continue the program, release the emergency stop button and confirm the alarm message.	

7   ERRORS

7.1   Notes

Any failure occurring during the operation of the Cromatec is indicated by an alarm sound and message, shown on the display. Please refer to the trouble shooting list.

7.2   PopUp messages in normal operation

After pressing STOP: Red PopUp "Would you really cancel all staining procedures?"	 Press "OK" to confirm or go back.
After confirming of cancellation: Red Info PopUp	 Wait while staining is being stopped.
After confirming of "PAUSE"	Staining procedures interrupted since hh:mm:ss Terminate PAUSE with "OK".

After pressing Emergency button:
 	
Red PopUp
 	
„EMERGENCY STOP"
	
	Staining procedures interrupted.
	
	Resolve problem, unlock
	
	    EMERGENCY HALT and select:
	
	    [Continue] [Cancel]

After canceling by "Cancel" after emergency stop: Red PopUp "EMERGENCY STOP"	Manually remove specimen, then touch "OK". [OK]
After opening of hood: Red PopUp „Lid open"	 Staining procedures interrupted. Close lid and touch "OK". [OK]

Flow of the filter running time: Yellow PopUp "INFO"	Filter usage time expired, please replace. 　　[OK]
Expiration of reagent: Yellow PopUp "INFO"	 At least one reagent expired, please replace. 　　[OK]
At start attempt despite emergency stop: Yellow PopUp "EMERGENCY HALT"	Resolve problem, unlock 　　EMERGENCY HALT and select: 　　[OK]
When starting with open hood: Yellow PopUp "Lid open"	 Close lid and touch "OK". 　　[OK]
When starting with "Auto" inside a program: Yellow PopUp "INFO"	Program invalid: 　　Empty/Auto is allowed 　　only right-aligned. 　　[OK]
At start-up with water requirement and without pressure: Yellow PopUp "INFO"	 Program requires water, but pressure is too low. 　　[OK]
At initial attempt with almost empty battery: Yellow PopUp "INFO"	 Battery voltage too low, charge before starting. 　　[OK]

In the case of a start experiment with samples still attached to the arm: Yellow PopUp (State after prior emergency stop) "INFO"	 Specimen found at transport arm. Please remove. [OK]
On start with expired filter running time: Yellow PopUp "INFO"	Filter usage time expired please replace. [OK] (Start nevertheless possible)
When starting with reagents that have expired: Yellow PopUp "INFO"	At least one reagent expired, please replace. [OK] (Start nevertheless possible)
When fan error occurs while hot air station is in use, hot air station will be switched off for safety reasons. Call service.	
Hot air station is not working anymore. Call service.	
In addition to the yellow pop up, the red fan icon will show up. Call service.	

7.3   Error messages in normal operation

Motor Error: Red PopUp "MOTOR ERROR"	Staining procedures interrupted since hh:mm:ss [Retry] [Cancel] Messages: Overcurrent horizontal Overcurrent vertical Timeout horizontal Timeout vertical
Failure of the magnetic control: Red PopUp "MAGNET ERROR"	Specimen transport impossible Manually remove specimen and call service Note: no OK-Button, present program will be cancelled!
Downstream pressure: Red PopUp "ERROR"	Water pressure too low. [OK]
Leakage: Red PopUp "ERROR"	Water leakage detected. -- places see below. -- [OK] Places: (container) (enclosure) (container and enclosure)
No more samples in the enema during the admission test: Yellow PopUp "INFO"	No specimen found in input station. [OK]
Other holders in the system when attempting to take sample holders: Yellow PopUp "INFO"	Specimen found in stations 1-20. Please remove. [OK]
Output station full: Red PopUp "Output station full"	Process hold for hh:mm:ss. Remove specimen, then touch OK. [OK]
Glue the sample holder to the arm (raised too much): Red PopUp „ERROR"	Specimen sticking at n1 n2 n3 (Station number) Correct, then touch OK. [OK]

Specimen lost (while lifting down):
 	
 Red PopUp
 	
 „ERROR"
	Specimen lost at n1 n2 n3 (station no.)
	
	     Correct, then touch OK.
	
	     [OK]

Specimen holder stick or lost (combination 8+9): Red PopUp
 	
 „ERROR"
	Specimen sticking at n1 n2 n3 (station no.)
	
	     Specimen lost at n4 n5 n6 (station no.)
	
	     Correct, then touch OK.
	
	     [OK]

Unexpected samples in the unit (detected during lowering): Red PopUp „ERROR"	Alien specimen found at n1 n2 n3 (station no.) Correct, then touch OK. [OK]
Fail-safe sensor in run-in station (continuous signal): Red PopUp „ERROR"	Input station sensor failure. [OK]

Invalid internal state: Red PopUp
 	
 „SYSTEM ERROR"
	Invalid internal state.
	
	     Touch OK and shutdown.
	
	     [OK]

Display not working or not connected correctly	Lights are flashing

i	Never use deformed baskets. A damaged basket can stop the staining process. Fill the baths up to the mark. Check the filling level daily.

7.4 Power failure

The Cromatec has a built-in battery to allow the unit to work even in a case of power failure. In case of a power failure the display shows the following symbol:

The operation is continued using the emergency power supply. As the battery gets loaded during operation, a fully loaded device can be operated using the battery. However, new slide baskets shall not be placed during indicated battery operation.

i	During battery operation the light and ventilation is being switched off.
	Cromatec II: The heating element is also switched of.

If the power comes back, the battery symbol disappears and the device turns back to regular operation, including light and ventilation. No action from the user is needed.

7.5 Hood

When the hood is opened, the device stops immediately, and the following Red PopUp window is shown.	

	The Cromatec I / II will not perform any staining program while the lid is open. When the lid is opened, the ventilation will automatically be increased.

8 CLEANING

8.1 General cleaning advice

The Slee linear stainer Cromatec I / II has a solvent resistant surface area according to the requirements of histological laboratories so that an easy cleaning can be done without problems. Only the display should be cleaned with a damp cloth.

⚠	Before starting the cleaning, please turn off the device. Dispose of used reagents according to the laboratory regulations in force in your country.
	Do not use alcohol, detergents containing alcohol (window cleaner!), abrasive cleaning powders, solvents containing acetone or xylene.

Inner side of the Cromatec I / II:

Please remove the cuvettes and clean the stainless-steel inner panels carefully with a regular cleaner.

Transport system:

Be careful with the lower side, where the magnets are located. In normal operation it should be sufficient to wipe with a water moisture cloth.

Outside surfaces:

Please clean the outside surfaces with a mild detergent and subsequently wipe down with a moistened cloth.

For the window, use a moisture cloth.

Screen:

Please use a commercial screen cleaner for cleaning the touch screen.

Cuvettes:

It is also possible to clean the staining cuvettes with a usual dish washer. Please consider the chemical rests in the troughs and their harmful influences to the environment.

Inlet/Outlet hose:

Please check weekly the waste water drain hose for accumulated dirt, particularly for algae. Clean whenever necessary.

⚠	Do not expose the device to regular domestic or industry waste. It contains electrical parts that can be dangerous to the environment!

8.2   Schedule of cleaning for staining system:

_____

Date	Staining troughs	Water bath	Tube System	Name

8.3 Optimized H&E program

Station	Reagent	Time
1	Xylol	1,30
2	Isopropanol	1,30
3	Isopropanol	1,30
4	96% Ethanol	1,30
5	96% Ethanol	1,30
6	Water	1,30
7	Hemalum	1,30
8	Hemalum	1,30
9	Water	1,30
10	Glacial acetic acid	1,30
11	Running Water	1,30
12	Running Water	1,30
13	96% Ethanol	1,30
14	96% Ethanol	1,30
15	Eosin	1,30
16	96% Ethanol	1,30
17	96% Ethanol	1,30
18	Isopropanol	1,30
19	Isopropanol	1,30
20	Xylol	1,30

9 SERVICE

Internal components should only be serviced by technicians authorized by SLEE medical GmbH.

If technical service or spare parts are necessary, please contact your local SLEE medical GmbH distributor. Please have the following information available:

- Complete contact details

- Type of device and serial number

- Place of device and name of user

- Purpose of service call

- Delivery date of the unit

If it is necessary to return the device, it must be cleaned and disinfected before delivery. It must be returned in its original packing, to avoid transport damage.

If the device or parts thereof are sent back in a dirty or non-disinfected condition, SLEE medical GmbH reserves the right to return the parts to the debit of the customer without carrying out repairs or maintenance.

10 WARRANTY

SLEE medical GmbH guarantees that the product delivered has been subjected to a comprehensive quality control procedure, and that the product is faultless and complies with all technical specifications and/or agreed characteristics warranted.

SLEE medical GmbH guarantees that the device is manufactured under an ISO 9001:2015 and ISO 13485:2016 quality management system.

Unauthorized modification or repair by third party persons will void the warranty.

Only original Slee spare parts must be used.

Guarantee claims can be put forward only if the device is used according to this manual and for the purpose described.

Mistakes and errors which occur because of improper use cannot be accepted.

11 DISPOSAL

The device or parts of the device must be disposed of according to existing local applicable regulations.

⚠️	Do not expose the device to regular domestic or industry waste. It contains electrical parts that can be dangerous to the environment!
